

MOHD ZISHAN

Software QA Engineer

Delhi, India | 7011299855 | ansarizishan901@gmail.com | linkedin.com/in/mohd-zishan-7811ab126

PROFESSIONAL SUMMARY

QA Engineer with 4.5+ years of manual testing experience across Telecom, Web, Mobile (Android/iOS), and Smart TV platforms. Proven track record executing 50+ test cases per release across functional, regression, and end-to-end test cycles for a live consumer streaming product. Skilled in defect lifecycle management (Jira), API testing (Postman), SQL-based backend validation, and Agile Scrum delivery. Recently expanded into ETL/data validation testing and working knowledge of Selenium/Java for regression automation. Comfortable working cross-functionally to protect release quality under recurring delivery deadlines.

CORE COMPETENCIES

Manual & Functional Testing • Regression, Smoke & Sanity Testing • Integration & End-to-End Testing • UAT • Test Case Design & Execution • Defect Tracking & Defect Lifecycle (Jira) • API Testing (Postman) • SQL / Database Validation • ETL / Data Validation Testing • Agile Scrum • SDLC / STLC • Cross-Platform Testing (Web, Mobile, Smart TV) • Release Validation • Selenium WebDriver (Java) — regression automation

PROFESSIONAL EXPERIENCE

Software QA Engineer | TELUS International Feb 2022 – Present

Execute 50+ manual test cases per release across functional, regression, smoke, sanity, integration, and end-to-end test cycles for a live consumer streaming application.

Own quality validation across Web, Mobile (Android/iOS), and Smart TV platforms, testing consistently across multiple device and browser combinations to catch platform-specific defects before release.

Design and maintain structured test cases and test scenarios, improving repeatability and reducing gaps in regression coverage release over release.

Log, triage, and track defects end-to-end through the defect lifecycle in Jira, working directly with developers to reproduce issues and confirm fixes.

Perform API testing using Postman and backend data validation using SQL to verify data integrity across services.

Contributed to ETL/data validation testing, performing source-to-target data checks and reconciliation to confirm data accuracy across pipeline stages.

Participate in Agile Scrum ceremonies (sprint planning, standups, retros) and lead release validation checks ahead of production sign-off.

Automate select high-value regression scenarios using Selenium WebDriver and TestNG, reducing repetitive manual effort on stable feature areas.

QA Intern | TELUS International Oct 2021 – Feb 2022

Executed manual test cases for telecom applications under senior QA guidance, building a foundation in structured test execution.

Supported smoke, sanity, and regression testing activities ahead of scheduled releases.

Assisted in defect logging and release validation, gaining early exposure to full release-cycle QA.

KEY PROJECT — TELUS TV APP

Domain: Telecom / Streaming | Role: Software Quality Analyst

Validated core product functionality including live streaming, playback, channel navigation, subscriptions, and DVR recording across supported platforms.

Verified recording synchronization across multiple devices, directly supporting a consistent cross-device viewing experience for end users.

Conducted API testing (Postman) and MySQL-based backend validation to confirm data accuracy across streaming and subscription services.

Maintained structured test cases, execution reports, and defect logs in Jira, giving the team clear release-readiness visibility.

EDUCATION

Bachelor of Technology, Computer Science Engineering

Al-Falah University | 2016 – 2020
